

Dell Children's Hospital

Dell Children's Hospital of Central Texas is located in Austin, Texas and serves a 46 county area. The facility is located on a 32 acre plot of land that was formerly a municipal airport. The 200 Million dollar, 473, 000 square foot facility is described as "high-tech, high-touch". The designers achieved a sustainable healing environment that uniquely accommodates the needs of patients coping with critical illnesses while encouraging positivism amongst patients, families, and healthcare workers. Another unique feature that sets this facility apart is the fact that this facility is slated to be the first hospital to achieve LEED Platinum Certification (the highest certification a building can achieve in LEED). VT manufactured approximately **1,500 Plain Sliced White Maple Flush Wood Veneer Doors**. All of the doors were slip and balanced matched and had a clear finish.
