#P112F

Revision 03

Applies to Flush doors

90-MINUTE DOUBLE EGRESS PAIRS

VT Industries is able to provide 90-minute double egress pairs of doors without the use of metal channels, including the following:

90-minute pairs up to 8-0 x 9-0:

- Two-point latching with surface or concealed vertical rod only (no thermal pin or bottom rod required).
- Three-point latching (active door having a lock and inactive door with flush bolts going into the top of the frame and into the floor).

90-minute pairs up to 8-0 x 8-0:

- Double Egress with two-point latching using surface or concealed vertical rods (no thermal pin or bottom rod needed).

Doors were tested using Georgia-Pacific's new mineral core. Doors are also approved using a listed surface vertical rod exit device (four-point latching).

Construction requirements are concealed by VT's preferred edge which means doors are identical in appearance throughout the project.

Approved for use on both HPDL and 5-ply wood veneer flush doors.

Lite sizes follow current guidelines for all VT 90-minute doors.

All concealed vertical rod exit devices require 5" legged channels except for Adams Rite 3900.
